Subject: Request for Support and Cooperation for a Final Project on a Clinic Records Management System on Holy Angel University

Dear Sir/Madam:

Greetings of peace and good health!

We are third-year Computer Science students from section CS-302 of Holy Angel University, currently working on our final project under the guidance of Prof. Evicen Flores. We are respectfully writing to request the support and cooperation of the University Clinic for our proposed project, a Clinic Records Management System.

Our project aims to digitize this process by developing a database-driven application that allows authorized clinic personnel to create, view, update, and delete (CRUD) clinic records such as patient information, consultation logs, and medicine inventory. Through this system, we hope to help the clinic save time on record-keeping, reduce paperwork and errors, and retrieve records more quickly and securely.

In line with this, we humbly request the clinic's permission and assistance in the following:

1. Allowing us to conduct a short interview with clinic personnel regarding their current record-keeping process;
2. Providing blank or sample copies of the forms and logbooks currently in use, with no actual patient information; and
3. Participating in the evaluation and testing of the system once a working version is ready.

Rest assured that all information gathered will be treated with strict confidentiality and will be used solely for academic purposes, in accordance with the Data Privacy Act of 2012 (Republic Act No. 10173). No actual patient records will be collected or disclosed without proper authorization.

Your support will be a great help to the success of our final project, and we hope that the resulting system will be of real use to the clinic. Thank you very much for your time and kind consideration.

We would also like to emphasize that any clinic data, information, or records that may be relevant to the development of the system are entirely optional for the clinic to provide. The University Clinic may choose whether or not to share such information, and no actual patient data is required for our project. Should any information be provided, only data that the clinic voluntarily agrees to share will be used, and it will be handled with the utmost care, confidentiality, and respect for privacy regulations.

Respectfully yours,

Sean Jarin Dela Cruz
